

DETECTAPRO PENS ARE SUPERIOR QUALITY

COMPARED TO INEXPENSIVE OFFSHORE PENS

INK QUANTITY

One of our pens has as much ink as nine of theirs.

Their pen has a plastic tube reducing the volume of the barrel and reducing the quantity of the ink.

BODY CONSTRUCTION

Our metal detectable pens are molded and assembled in the USA and have no springs or small parts.

The plunger mechanism must have a consistent tight tolerance to allow the pen to remain in the open or closed position every time the plunger is engaged. To achieve this, our molds are constantly monitored to ensure tight tolerances. Their pens are made offshore and have inconsistent plunger stability due to poor molding processes.

WRITING PERFORMANCE

Our pen has enough ink to write nine times as many pages as their pen.

Their offshore pen cartridges have an actual measured writing performance of approximately 20 pages or 2,231 feet compared to our high quality parker-style cartridge that has an actual measured writing performance of approximately 180 pages or 21,325 feet.

INK LEAKAGE

Our pen has better writing quality.

Our pen has enough paste and silicone sealing to prevent ink leakage and prevent ink from drying up. Their pen has a reduced quantity of paste and silicone sealing which causes the ink to leak and dry up quickly.

Inexpensive Offshore Pens Are Not a Bargain

You may be tempted to purchase inexpensive offshore pens thinking you are saving money, but in reality, you are getting an inferior product that can't compete with Detectapro RJ series retractable pens. At first glance, when looking at both an inferior offshore pen cartridge and Detectapro's superior Parker-style pen cartridge, they can be difficult to tell apart. But look inside—the interior of the offshore pen has a plastic tube reducing the volume of the barrel, thereby reducing the quantity of the ink. Offshore pens dry up quickly, have blotchy ink, and uneven writing because they have less paste and no silicone sealing compound.

Detectapro pens are molded and assembled in the USA and have a high quality Parker-style quality pen cartridge. Our RJ series pens are durable and reliable, providing great writing quality.
